

MFP/MFP-S – Munters Folding Curtains

Curtains and wind protection

Munters folding curtains have been developed for use in cattle, pig and poultry stalls. The curtains combine the need for ventilation in the barn with easy maintenance and economic efficiency. It can replace the entire external wall of the barn building or parts of it.

Advantages

- surface with antistatic qualities rejects dirt (straw, sand, dust)
- Variable opening
- Curtain opens from top down
- Operated either manually, semi-automatic or fully automatic
- Optimal light transmission
- Does not require additional safety measures

As a safeguard against high wind loads, special wind pipes are mounted approximately every two metres along the length of the barn (the distance between the wind pipes varies depending on the opening height). Wind pipes are mounted on both the outside and the inside of the curtains and therefore also helps with their stability.

The curtains are equipped with either a VA pull-cord system (MFP) or a belt system (MFP-S). The pull-cord system is operated vertically with a hand crank or with a winch motor. The belt system is always operated electrically. You can opt for a semi-automatic solution with a manual controller or for fully automatic regulation where the Munters NaturalMaster/Center climate control regulates the degree of curtain opening.

		MFP	MFP-S
Max. height	[m]	3.0	4.0
Max. length	[m]	100 (max. 150 m ² per section)	100 (max. 300 m ² per section)
Voltage	[V]	1~230	
Function		Open from the top down	
Accessories		Automatic regulation	
Colour		Light grey
